HR Attrition Analysis Dashboard

Prepared By _: Poojitha M
Date : January 2026
Version : 1.0

PROJECT OVERVIEW

The HR Attrition Analysis Dashboard is developed using Power BI to help HR teams understand employee attrition and identify the key factors influencing employee turnover. The dashboard presents important HR metrics through interactive charts, KPI cards, and filters, making it easier to analyze employee data and support better business decisions.

1. FUNCTIONAL OBJECTIVE:

The main objective of this dashboard is to provide an interactive solution for analyzing employee attrition. It enables users to:

- Monitor overall employee attrition.

- Compare attrition across departments.

- Analyze the importance of overtime on attrition.

- Understand how job satisfaction relates to employee turnover.

- Study attrition trends based on years at company.

- Filter data for detailed analysis.

2. DATA SOURCE

Source Description

HR Employee Dataset Contains employee details such as department , job role, gender, monthly income, overtime status, job satisfaction, years at company, and attrition information.

3.KEY PERFORMANCE INDICATORS (KPIs)

Total Employees

Purpose: Displays the total number of employees available in the dataset.

Calculation

Total Employees = COUNTROWS('HR-Employee-Attrition')

Attrition Count

Purpose: Displays the total number of employees who have left the organization.

Calculation

Attrition Count=

CALCULATE(COUNTROWS('HR-Employee-Attrition'),'HR-Employee-Attrition'[Attrition] = "Yes")

Attrition Rate

Purpose: Displays the percentage of employees who have left the organization.

Calculation

Attrition Rate = DIVIDE ([Attrition Count], [Total Employees])

Format Percentage (%)

Average Monthly Income

Purpose: Displays the average monthly income of employees.

Calculation

Avg Monthly Income =

AVERAGE ('HR-Employee-Attrition' [Monthly Income])

Average Years at Company

Purpose: Displays the average number of years employees have worked in the organization.

Calculation

Avg Years at Company = Round (AVERAGE('HR-Employee-Attrition'[Years At Company]),1)

3. VISUAL REQUIREMENTS

Visual 1 – Attrition Rate by Department

Chart Type: Horizontal Bar Chart

Purpose: Shows the attrition rate across different departments, helping identify departments with higher employee turnover.

Visual 2 – Attrition Rate by OverTime

Chart Type: Clustered Column Chart

Purpose: Compares the attrition rate of employees who work overtime with those who do not.

Visual 3 – Attrition Rate by Job Satisfaction

Chart Type: Horizontal Bar Chart

Purpose: Displays the relationship between employee job satisfaction levels and attrition.

Visual 4 – Attrition Trend by Years at Company

Chart Type: Line Chart

Purpose: Shows how employee attrition changes based on the number of years employees have worked in the company.

Visual 5 – Key Insight

Purpose: Highlights the most important finding from the dashboard.

Insight Displayed: Sales department has the highest attrition rate. Employees working overtime also show a higher attrition rate compared to employees who do not work overtime.

5. FILTER REQUIREMENTS

The dashboard includes interactive slicers that allow users to filter the report by:
Department

Gender

Job Role

All KPI cards and charts update automatically based on the selected filters.

6. INTERACTIVITY REQUIREMENTS

The dashboard provides the following interactive features:

Dynamic KPI updates

Cross-filtering between visuals

Interactive slicers

Real-time chart updates based on user selections

7. BUSINESS RULES

Attrition Count includes only employees whose Attrition value is "Yes".

Attrition Rate is calculated using Attrition Count divided by Total Employees.

All calculations update automatically when filters are applied.

Dashboard visuals display summarized employee data.

8. NON-FUNCTIONAL REQUIREMENTS

The dashboard should:

Be simple and easy to use.

Display accurate information.

Respond quickly to user interactions.

Maintain a consistent layout.

Support HR decision-making with clear visualizations.

9. EXPECTED OUTPUT

The dashboard helps HR users:

Monitor employee attrition.

Identify departments with higher attrition.

Analyze the impact of overtime.

Understand employee satisfaction trends.

Study attrition patterns based on employee tenure.

Support employee retention planning.

10. CONCLUSION

The HR Attrition Analysis Dashboard provides an interactive and easy-to-use platform for analyzing employee attrition. The dashboard helps HR teams monitor important workforce metrics, identify attrition trends, and make informed decisions that support employee retention.
